## **The Aquasol Corporation Unveils its OX-100X Oxygen Monitor With Accessories Kit**

**North Tonawanda, NY** –The Aquasol Corporation, an innovative welding supply manufacturer, is pleased to announce the launch of its newly enhanced OX™-100 Oxygen Monitor with Accessories Kit. The monitor accurately measures oxygen concentration with .01% (100 ppm) resolution.

The OX™-100X Kit adds functionally with a polycarbonate carrying case to protect the Oxygen Monitor and offer convenient storage for all essential tools. Included in the Accessories Kit is a five foot (1.5 meter) neoprene extension tube with stainless steel probe for remote monitoring, four AA batteries, a Phillips Head screwdriver, Product Manual and Quick Instruction Sheet.

The OX™-100X Kit is housed in a heavy-duty yet lightweight polycarbonate case that bears a lifetime warranty. The injected molded case design makes it airtight, waterproof and impact resistant.

As welders know, the displacement of oxygen with an inert gas prior to welding is paramount. Trace levels of oxygen higher than .01% can lead to oxidation, discoloration, and eventual failure of the welded area. With the OX™-100X, welders will know exactly when proper oxygen levels have been reached, allowing them to achieve a high quality weld. Additional OX™-100X features include: automatic calibration, internal pump, and CE certification/approval.

"Our clients appreciate the practicality of the accessories included with the OX-100X Kit. " said Aquasol President, Mike Hacikyan.

The Aquasol Corporation is the manufacturer of Aquasol® Water Soluble Paper and Tape; EZ Purge®, EZ Zone® Tape, EZ Wipes®, Fiback™, SoluGap™ and SoluShim™.
